

PRESS RELEASE 12/08

GERMANY'S SPECIALIST FOR TOOL PRESETTER AND MEASURING MACHINES INVESTS IN THE FUTURE

E. Zoller GmbH & Co. KG opens new premises in Pleidelsheim

The relocation from Freiberg to its brand new headquarters in Pleidelsheim which offer considerably more space for management and manufacturing is connected with an expected growth in turn-over. At the same time this underlines ZOLLER's belief in Germany's excellent perspectives for the future and its high economic potential.

After years of perpetual growth, the facilities in Freiberg had simply become too small for an enterprise still on the path of expansion, explains Eberhard Zoller, general manager and owner.

In only 14 months a spacious, modern building of 10,000 square meters designed for a staff of more than 180 was built in Pleidelsheim – offering ample space for innovative development, administration, service and production all under one roof and only a mere three kilometers from the old site.

Having actually moved from its long-standing premises in Freiberg on September, 29, an official inauguration ceremony was held on October, 17.

Generating an ideal networking structure for the various departments was the main guideline when planning the new building, especially concerning

- Optimizing the manufacturing workflow
- Ensuring short distances between the consecutive departments
- Providing the infrastructure for the next ten to twelve years

Starting with the incoming goods, followed by the final assembly and quality tests and ending with packaging and shipping of the tool presetter and measuring machines which are assembled in a wide variety of different versions and models and in high quantities – everything is now integrated in a spacious new assembly

hall. This new production center combines innovative manufacturing processes with high standards of quality in an energy-efficient architecture, creating an internationally and in the long term competitive production site.

„We have been developing and producing in Germany and will continue to do so“, general manager Eberhard Zoller stressed during the ceremony and emphasized how the label „Made in Germany“ has been a major source for the company's success in the past and will still be the global player's guideline in the future.
