# Smart Cabinets — for Real Time and Cost Savings

No more searching for tools and accessories. With Smart Cabinets by ZOLLER, these software-linked storage cabinets ensure maximum transparency and organization with minimal effort. A wide variety of materials can be systematically stored and managed in the various Smart Cabinet models — from tools and tool components to accessories or measuring and inspection equipment. The Smart Cabinets are linked to TMS Tool Management Solutions, allowing you to graphically represent storage locations in 3D with just a click of the mouse. Get an overview of minimum inventory levels, and place orders quickly and easily.

The result: No more incorrectly stored items, and no more machine downtimes due to missing tools — with ZOLLER Smart Cabinets, you'll have your tools, components, and accessories in view and at hand. You'll also save both time and money.

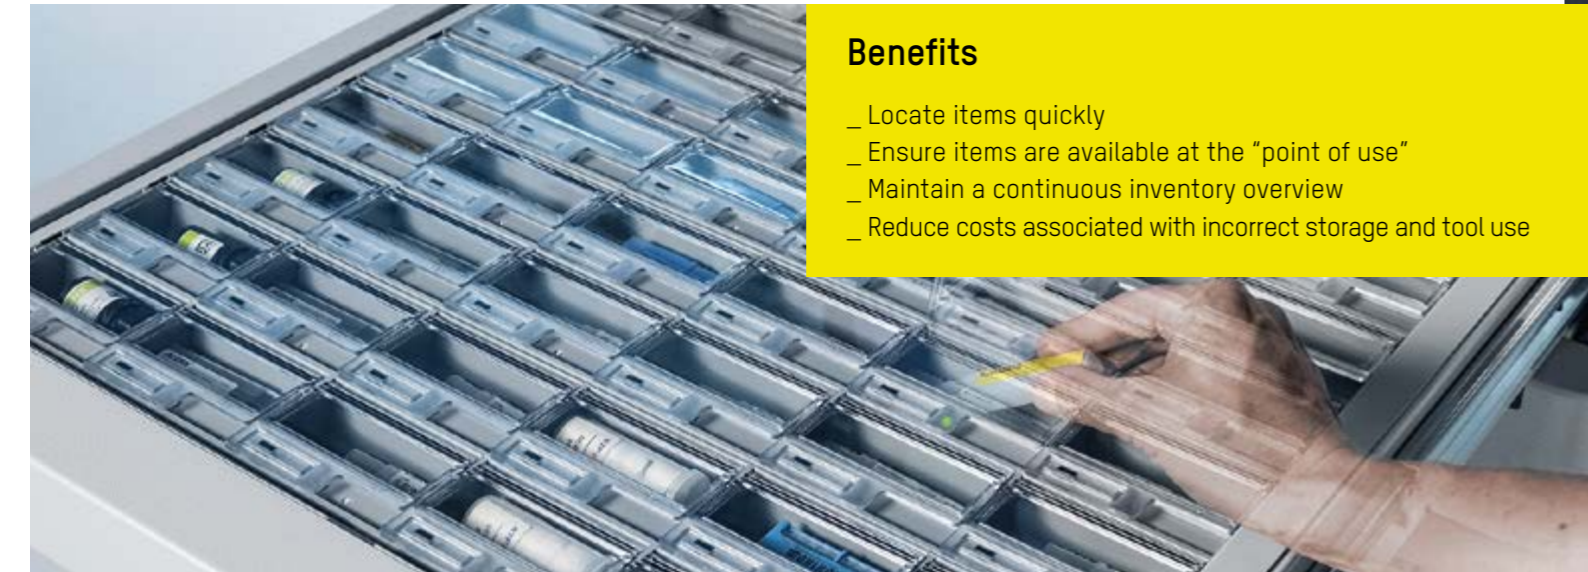

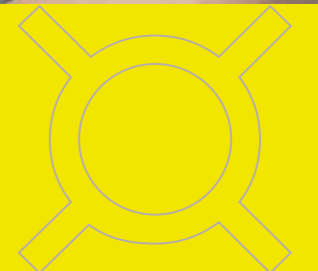

## Benefits

- \_ Locate items quickly
- \_ Ensure items are available at the "point of use"
- \_ Maintain a continuous inventory overview
- \_ Reduce costs associated with incorrect storage and tool use

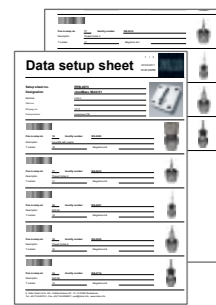

## Connected

Because the storage cabinets are linked to the ZOLLER Tool Management software, you maintain an overview of your inventory at all times.

# Efficient Tool Data Handling from a Single Source: Coordinated Hardware and Software Solutions

Consistent, from  
the setup sheet to  
the machine:

Tool lists are available  
as setup sheets.

Easy tool assembly using the  
ZOLLER Tool Assembly Assistant.

Tool presetting and measuring  
using ZOLLER presetting and measuring  
machines and secure data transmission  
to the machine.

Transport tools to  
the machine using the  
ZOLLER tool trolley.

The z.One central tool database guarantees uniform

basic tool data, through to the machine.

The right storage cabinet for any item. The storage locations for tools, components, and accessories are displayed, ensuring reliable access. They're available with just a click — right where they're needed.

## You also benefit from:

- \_ Uniform tool data
- \_ Consistent software interface
- \_ Link between the physical tool and its digital twin

toolOrganizer
