

ZOLLER ANNOUNCES EXTENSIVE LUNCH & LEARN WORKSHOP SERIES

The correct tool data anytime and anywhere: ZOLLER TMS Tool Management Solutions are key to a cost-effective manufacturing process

ZOLLER has been the leading manufacturer of tool presetter and measuring machines for more than 65 years and as such a reliable partner every step of the way in our customer's production processes.

We know the drill: Deadlines, cost saving demands, long setup times, crashes or wasted time searching for the right tool are all a part of the daily struggle.

Continuous research and development in close cooperation with our customers has resulted in innovative ZOLLER products and software, developed specifically to streamline manufacturing processes all over the world. Our three newly developed, coordinated software packages with TMS Tool Management Solutions BRONZE, SILVER and GOLD, offer a modular design, optional upgrades and are easy to implement.

In an effort to introduce our customers to the latest technology, provide hands-on experience and cost-effective solutions, ZOLLER is announcing an extensive Lunch

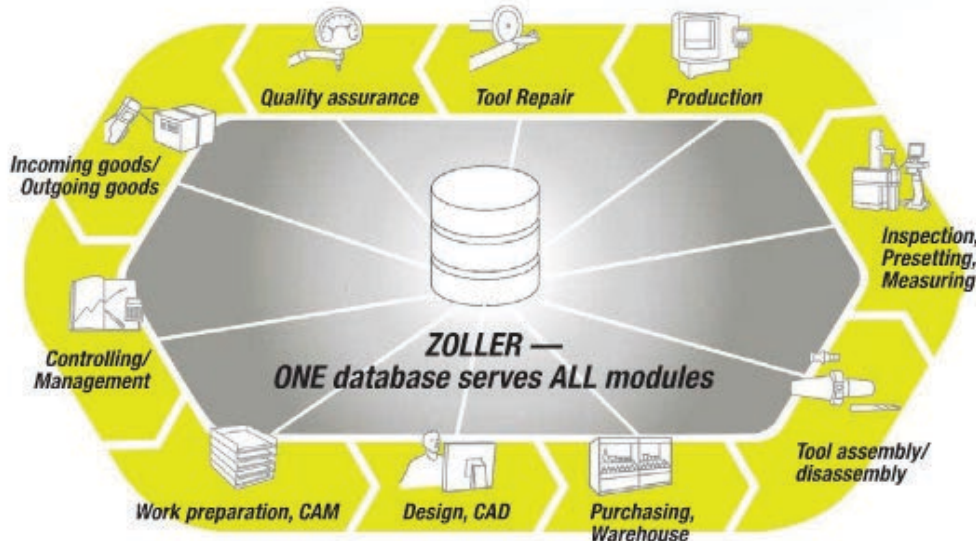

& Learn Workshop Series at our various office locations across the USA and Canada as well as selected partner facilities. A total of 72 workshops are planned throughout the year and will focus on optimizing production processes by introducing a transparent tool inventory management with a centralized tool data base, reducing setup times, decreasing tool costs, economical manufacturing of even small batch sizes and maintaining an overall high process security.

The workshops are free of charge and everybody interested in experiencing hands-on high-performance tool management solutions for an efficient manufacturing process is welcome to sign up. Participant numbers per workshop are limited to 10-15 max.
